Group #11:

Info:

Graded by:
[Deliverables 1-3] Stephen Luc (stephen.luc@mail.utoronto.ca),
[Deliverables 4-6] Daniel Persaud (dev.persaud@mail.utoronto.ca),

Remark Policy & Rubric: please consult the handout / course syllabus, see mark breakdown section for weighting of deliverables.

Mark Breakdown

Deliverable #1 (summary.md):	8/10
Deliverable #2 (competition.md):	10/10
Deliverable #3 (personas):	24/25
Deliverable #4 (user_stories.md):	23/25
Deliverable #5 (UI/UX):	20/20
Deliverable #6 (process.md):	9/10
Total Mark:	94/100

TA Comments

- **Summary.md,** Overall the summary is well written however, it seems that you have forgotten to write down a few scenarios where your application would be useful to the users. (-2) The purpose of the scenarios are to help allow you think of cases where your product will be used and the types of users who will be using it and what they are looking for in your product.
- **Personas,** Something that might be useful would be to write down the users proficiency with technology and computers. (-1) Since your application will be used on the computer you should know your users comfort levels with navigating a website. You've done a good job stating that Jane Smith wants a simple UI for the website but maybe for Charles Xavier you could say that he is proficient with computers and wants a search engine with multiple filter attributes. This will just allow you to be able to design a website for all the different sorts of users that you may have. Which would be something very simple for the average user, along with more advanced features for the more tech savvy users.
- **User Stories,** should have account creation stories (-2), organizing stories by categories is much appreciated.

- **UI/UX,** the items returned in search could use a larger content preview section like in google search results for UX purposes - think about what a user cares about when they see a search result and put more emphasis on those elements of the search result.
- Process, team should implement daily standup meetings where each member outlines progress in the last day & what they plan to do for the next day in a group chat or in person. What do you guys use to communicate (-1)?
